

WHATSAPP BROADCASTS

Shopify Basic Plan Guide

WhatsApp AI Customer Support Platform

This manual outlines the process for Shopify merchants on the Basic Plan to send marketing campaigns and bulk messages on WhatsApp.

Since the Basic Plan does not sync store data automatically, merchants can export their customer database from Shopify as a CSV file and upload it directly into the AI Support Bot dashboard to trigger broadcast messages.

Follow the step-by-step instructions on the subsequent pages.

Step 1: Export Customers from Shopify

1. Log in to your Shopify Admin Dashboard.
2. Click on 'Customers' on the left sidebar menu.
3. In the top-right corner of the customers directory, click the 'Export' button.
(Note: Do not select individual customer checkboxes. The 'Export' button exports the entire list.)
4. In the pop-up modal, select 'All customers' and select the format:
'CSV for Excel, Numbers, or other spreadsheet programs'.
5. Click 'Export customers' to download the file directly.

Step 2: Verify CSV Formatting

Open the exported CSV file in Excel, Google Sheets, or Numbers and check the following:

1. Columns: Ensure you have columns labeled 'Name' (or 'First Name') and 'Phone' (or 'Phone Number').
2. Country Code: Phone numbers must include country codes (e.g., '91' for India, '1' for USA) without plus signs (+), spaces, or dashes.
 - Correct: 919876543210
 - Incorrect: +91 98765-43210

Step 3: Trigger the Broadcast

1. Log in to your AI Support Bot Dashboard.
2. Navigate to the 'Broadcast' page via the sidebar menu.
3. Enter a 'Campaign Title' for your internal reference (e.g., 'Summer Promo 2026').
4. Compose your message. You can use '{{name}}' to automatically personalize the text.
 - Example: 'Hi {{name}}! Check out our new arrivals today!'
5. Drag and drop or select your customer CSV file in the upload zone.
6. Click 'Send Broadcast' to initiate actual delivery.

IMPORTANT NOTE ON METAS SANDBOX (DEVELOPMENT MODE):

If your Meta app is in Development Mode, WhatsApp will block delivery to recipients unless they are manually added to your Meta Developer Account's 'To' recipient test number list.

This restriction will automatically disappear once the app transitions to Live/Production mode.
