

SHOPIFY CONNECTION

Step-by-Step Setup Guide

WhatsApp AI Support Bot Integration

This guide outlines the exact, step-by-step process to connect your Shopify store to the WhatsApp AI Support Bot dashboard. By creating a Shopify Custom App, you will allow the AI Bot to securely synchronize orders in a read-only manner, ensuring safe automated customer support routing without risking account suspension.

Please follow the instructions on the subsequent pages carefully.

Prerequisites & Scopes Required:

- Shopify Store Admin Owner access credentials
- Required API Scopes: read_orders, read_products, read_customers, read_fulfillments
- AI Support Bot Account active subscription

Step 1: Open Shopify Settings

Log in to your Shopify Store Admin. In the bottom-left corner of the dashboard sidebar, click on the Settings gear icon.

Step 2: Apps and Sales Channels

In the Settings side menu, locate and click on Apps and sales channels to manage integrations.

Step 3: Access Custom App Development

Click on the Develop apps button in the top right header to begin custom app configuration.

Step 4: Create App Instance

Click Create an app. In the modal, specify an App name (e.g. 'WhatsApp Support Bot') and select the Developer email. Click Create app.

Step 5: Configure Admin API Scopes

In the App Configuration screen, locate Admin API integration and click on the Configure Admin API integration button.

Step 6: Select Access Permissions

Check the boxes for `read_orders`, `read_products`, `read_customers`, and `read_fulfillments`. Scroll down and click Save.

The screenshot shows the Shopify App Development Overview page for an application named 'demo app store'. The left sidebar contains a navigation menu with categories like Organization, Users, General, Plan, Billing, Payments, Checkout, Customer accounts, Shipping and delivery, Taxes and duties, Locations, Markets, Apps (highlighted), Sales channels, Domains, Customer events, and Notifications. The main content area is titled 'App Development Overview' and includes tabs for Overview, Configuration, API credentials, and App settings. Under the 'Overview' tab, there is a section 'Select your access scopes to get started' with two options: 'Retrieve and sync store data with the Admin API' (highlighted with a red box) and 'Develop unique shopping experiences with Storefront API'. Below this is a 'Development history' table showing a single event 'App created' by user '@gmail.com' on 'Jun 14, 2026 at 09:47'. At the bottom, there is a section 'Explore documentation to speed up development' with links for 'Access store data with the Admin API', 'Develop custom shopping experiences with Storefront API', and 'Authenticate with access tokens'.

Explore documentation to speed up development

Access store data with the Admin API

Develop custom shopping experiences with Storefront API

Authenticate with access tokens

Step 7: Install Custom App

Go back to the top of the app overview tab. In the top-right corner of the page, click on the Install app button.

Step 8: Confirm App Installation

Review the API access warnings and confirm installation by clicking Install in the modal popup dialog.

Step 9: Retrieve API Credentials

Select the API credentials tab. Under the Admin API access token card, you will find the hidden token fields.

Step 10: Reveal Access Token once

Click on the Reveal token once link to display your secure credentials. This will only be shown once.

Step 11: Copy Admin Access Token

Copy the revealed access token (which begins with 'shpat_') and save it securely. Note: It cannot be displayed again.

Step 12: Note API Keys

Under the API credentials card, you can also view and copy the API key and API secret key if required.

The screenshot displays the 'Integrations' section of the WhatsApp AI Support Bot dashboard. The left sidebar contains navigation options: MAIN (Dashboard, Analytics, Live Chat, Conversations, Orders, Escalations, Billing & Plans, Profile & Store) and TOOLS (Broadcast, Knowledge Base, Integrations, WhatsApp Connect). The 'Integrations' section is active, showing two e-commerce platforms: Shopify and WooCommerce. The Shopify integration is marked as 'Connected' and shows a 'Webhook URL' field with the value 'https://samarth-whatsapp-bot.loca.lt/api/webhooks/shopify/7963b48192474daf4f59cc'. The WooCommerce integration has a 'Connect WooCommerce' button. The bottom of the sidebar shows the user profile for 'shubham chavda' with an 'ADMIN' role and a 'Sign out' button.

Setup Guide

Step 13: Connect on Support Bot Dashboard

Open your WhatsApp Support Bot Dashboard. Navigate to Integrations -> Shopify -> click Connect Shopify.

The screenshot displays the Shopify Admin interface for a store named 'demo store' (demo-store-axgyibgl.myshopify.com). The left sidebar contains a list of settings categories: General, Plan, Billing, Payments, Checkout, Customer accounts, Shipping and delivery, Taxes and duties, Locations, Markets, Apps, Sales channels, Domains, Customer events, Notifications (highlighted), Metafields and metaobjects, Languages, Customer privacy, and Policies. The main content area is titled 'Custom data' and features several sections:

- Admin API integration**: Includes a gear icon, a description to connect store data to backend services, and an 'Edit' button. Below this is a table showing 'Admin API access scopes' (read_orders, read_order_edits) and 'Webhook version' (2026-04).
- Storefront API integration**: Includes a storefront icon, a description to create unique shopping experiences, and a 'Configure' button.
- Protected customer data access**: A section describing access to shipping rates, events, webhooks, and meta fields, orders, checkouts, shipping and fulfillment, online store, and gift cards.
- Additional access available**: A section mentioning API access to personally identifiable information (PII) like customer names, addresses, emails, and phone numbers, available on Shopify, Advanced, and Plus plans. It includes an 'Upgrade plan' button.

The bottom of the page shows the user's name 'chavda samarth' and email 'chavdasamarth02@gmail.com'. The URL at the bottom is https://admin.shopify.com/store/demo-store-axgyibgl/settings/custom_data.

Step 14: Input Store URL & Token

Enter your Shopify Store URL (e.g. <https://your-store.myshopify.com>) and paste the Admin API Token. Click Connect.

Step 15: Retrieve unique Webhook URL

After connecting, your integration status will show 'Connected'. Copy the generated unique Webhook URL.

Step 16: Configure Webhooks in Shopify Settings

In Shopify Admin -> Settings -> Notifications -> Webhooks -> click Create Webhook. Paste the copied URL, select Order update (orders/update), JSON, and click Save. No other events are required.
